$S < A$: subdivision of $\alpha \to b$
$w = (4, 5, 6, 7)$, $\alpha = 4$, $\beta = 1$, $b = 2$
$S = 3$, $A = 4$, $B = 5$

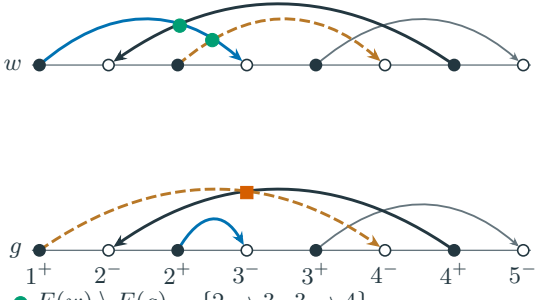

● $E(w) \setminus E(g) = \{1 \to 2,\ 4 \to 1\}$
■ $E(g) \setminus E(w) = \{4 \to 2\}$

$A \le S < B$: a new winding-one triangle
$w = (3, 4, 5)$, $\alpha = 3$, $\beta = 1$, $b = 2$
$S = 3$, $A = 3$, $B = 4$

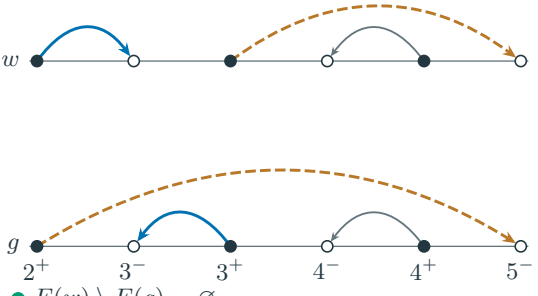

● $E(w) \setminus E(g) = \{1 \to 2,\ 2 \to 3,\ 3 \to 1\}$
■ $E(g) \setminus E(w) = \varnothing$

$B \le S$: subdivision of $b \to \beta$
$w = (3, 4, 5, 6)$, $\alpha = 3$, $\beta = 4$, $b = 2$
$S = 4$, $A = 3$, $B = 4$

● $E(w) \setminus E(g) = \{2 \to 3,\ 3 \to 4\}$
■ $E(g) \setminus E(w) = \{2 \to 4\}$

$A = b$: no edge changes
$w = (1, 3, 5)$, $\alpha = 3$, $\beta = 2$, $b = 3$
$A = b = 3$

● $E(w) \setminus E(g) = \varnothing$
■ $E(g) \setminus E(w) = \varnothing$
